## Whatever your Perspective

# How could software supported Self Evaluation and Planning contribute to your school's development?

### From a Professional perspective what about:

- Guidance from Inspectors recently trained in the use of the new OfSTED framework?
- Support to help ensure judgments and grades are matched?
- Open 'Bite Size' questions that tease out what the SEF requires and why (for School & Departments)?
- 'Road signs' pointing the way to appropriate evidence and its use?

### From a Management perspective what about:

- Collaboration within and between teams of any shape or size?
- Consistency of approach that provides Management with clarity and comparability?
- Your choice of a 'top down, bottom up' controlled approach to self evaluation
- Self evaluation outcomes (school and team) that reciprocate with Planning (school and team)?

### From an administrative perspective what about:

- A multi user, secure, online system that is robust, reliable, secure and easy to use?
- A central repository of all the evidence needed and used to support judgments?
- A reference library of national (e.g. FFT), local (LA) and school based data that is relevant to SSE?
- Electronic upload to, and download from, the OfSTED SEF website?

### From an added value perspective what about:

- Editable online surveys for collecting, collating and analyzing stakeholder views
- A stepping stone towards integration of Performance Management with SSE and Development Planning

Whatever your perspective; Management, Professional, Administrative; Angel Solutions' online system 'Perspective', helps schools of all sizes, types and circumstances, extract greater value from self evaluation and planning so that they have added impact and contribute more to outcomes.
